Passing Information Assessment

Instructions: Create an application with four separate view controllers. One view controller should be transitioned into programmatically, the other view controller should be transitioned into using segue. You should also pass information forward to one view controller, as well as pass the information backwards twice into different view controllers using delegation and notification pattern.

Overview:

A. Create four view controllers
B. Transition into different view controllers using programmatic approach and segue
C. Pass information forward to another view controller
D. Pass information backwards using delegation and notifications pattern
